

Welcome to the New Standard in Smoking Filtration by Scientific Inhalations

SI's kit comes with carbon/cotton bubbler, down stem, bowl, mouth piece, Activated Virgin Coconut Carbon, Organic Cotton and a pic.

Instructions

1. Pour cold water into bubbler until you reach the "water line".
2. Fill down stem with Activated Virgin Coconut Carbon leaving approximately 1/4" of airspace between the bottom of the joint frost and the Activated Virgin Coconut Carbon.
3. Place down stem with Activated Virgin Coconut Carbon into female joint at the top of the bubbler making sure it is securely connected.
4. Place the glass bowl/slide into the female joint that is on the top of the down stem making sure it is securely connected.
5. Take one Organic Cotton ball and unroll it, pulling off a small amount of the cotton ball. Spread apart this piece of the Organic Cotton so as to loosen it to help get a good draw.
6. Take your pic and push the Organic Cotton into the cotton chamber making sure that it is loose. (**DO NOT PACK** THE COTTON INTO THE CHAMBER.)
7. Place the mouth piece into the female joint on the top of the glass cotton chamber with Organic Cotton in place, making sure it is securely connected.
8. Start off with very small inhalations and over time you will determine how much of a draw you can take.

Over time you will find what your personal needs are with regard to how often to change your carbon and water. We suggest you change your Activated Virgin Coconut Carbon when you notice that the cresol/tar has covered the carbons (approximately 100 inhalations). You will want to take your pic and scrape the crown of the carbon so as to loosen it up so the activated virgin coconut carbon comes out of the downstem.

We also suggest that you get into the habit of changing your water in the water pipe after approximately 20 inhalations (4 to 5 times in between down stem changes) as the filtration works so well that your water will continue to look clean even when there are impurities within.

As for washing your water pipe simply rinse it with rubbing alcohol and warm water or use a commercial cleaner found at your local smoke shop.

Most Importantly – **Enjoy! Your Health is Your Wealth!**
